100 METER GRID SQUARES BY REFERENCE
1. "Read large numbers" looking in VERTICAL and
left side of page and estimate tenths (100 meters)
from grid line to point. (20 1/2)
2. Read large numbers looking in HORIZONTAL and
top side of page and estimate tenths (100 meters)
from grid line to point. (20 1/2)
3. Add the two estimates to get the point. (20 1/2 + 20 1/2 = 41)
Example NAD 83: 28077
NAD 83 Example: 28077
100 METER GRID SQUARES BY REFERENCE
1. Estimate Easting value without grid. (20 1/2)
2. Subtract Easting value from estimated point NAD 83:
(20 1/2 - 175) = 28077
