Hydrographic/Topographic Center, Washington, D.C.

LEGEND  
SIGNOS CONVENCIONALES

On this map a lane is generally considered as being 8-12 feet (2.5-3.6 meters) in width  
En este mapa una vía tiene generalmente una anchura de 8 a 12 pies (2.5-3.6 metros)

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

GRID ZONE DESIGNATION  
DESIGNACIÓN DE ZONA DE CUADRÍCULA

16P

100 METER REFERENCE

1. Read large numbers labeling the VERTICAL grid line left of point and estimate tenth (100 meters) from grid line to point. 12 3

2. Read large numbers labeling the HORIZONTAL grid line below point and estimate tenth (100 meters) from line to point. 45 6

Example: 123456

WHEN REPORTING ACROSS A 100,000 METER LINE, PREFIX THE 100,000 METER SQUARE IDENTIFICATION, IN WHICH THE POINT LIES.

Example: DK123456

REFERENCIA DE 100 METROS

1. Leer las cifras grandes correspondientes a la línea VERTICAL de la cuadrícula situada a la izquierda del punto y estimar los décimos (100 metros) entre la línea mencionada y el punto. 12 3

2. Leer las cifras grandes correspondientes a la línea HORIZONTAL de la cuadrícula situada debajo del punto y estimar los décimos (100 metros) entre la línea mencionada y el punto. 45 6

Example: 123456

CUANDO SE HACE REFERENCIA A UN PUNTO AL OTRO LADO DE UNA LÍNEA DE 100,000 METROS, ANTEPÓNGASE A LA REFERENCIA ANTERIOR LA IDENTIFICACIÓN DE LA CUADRÍCULA DE 100,000 METROS, DENTRO DEL CUAL SE ENCUENTRA EL PUNTO.

Example: DK123456

WHEN REPORTING OUTSIDE THE GRID ZONE DESIGNATION AREA, PREFIX THE GRID ZONE DESIGNATION.

Example: 16PDK123456
